◆ PROJECT PROPOSAL

Hardware Tools E-Commerce Platform

Full-Stack Commerce & Delivery Platform with Real-Time Tracking, B2B Invoicing, and Rider Management

PREPARED FOR

Sandeep

PREPARED BY

PineappleLabs

TIMELINE

16–18 Working Weeks

DATE

May 9, 2026

EXECUTIVE OVERVIEW

This proposal outlines the design, development, and deployment of a comprehensive Hardware Tools E-Commerce Platform — covering a responsive customer website, an admin operations dashboard, and a rider mobile application. The MVP focuses on launching the core commerce experience with real-time delivery tracking, B2B invoicing, bulk ordering, and full operational management capabilities.

THE OPPORTUNITY

Build a modern, scalable e-commerce platform for hardware tools with integrated real-time delivery tracking, GPS-powered rider management, and B2B commerce features including bulk ordering, GST invoicing, and business-focused checkout optimization.

OUR APPROACH

A research-first, agile execution methodology with structured brainstorming sessions, collaborative ideation workshops, iterative UI/UX prototyping, and team-based delivery — ensuring technical feasibility, business alignment, and premium user experience at every stage.

PLATFORM MODULES

Customer Website

Responsive Web App

- Core:** Product browsing with categories & brands, keyword search, filters, product detail pages with specs & compatibility
- Commerce:** Shopping cart, checkout flow, payment gateway, order history, invoice access, promo codes & discount engine
- B2B:** Business accounts with GST details, bulk ordering, B2B invoice generation, business-focused checkout optimization
- Tracking:** Real-time delivery tracking with live rider map, email/SMS/in-app notifications, support & return workflows

Admin Dashboard

Operations Panel

- Overview:** Dashboard with sales & operational KPIs, analytics & reporting (order volume, revenue metrics)
- Management:** Product, category & inventory management, order & fulfillment workflows, customer support & issue handling
- Delivery:** Rider assignment workflows, live delivery monitoring map, GPS tracking of active deliveries
- Admin:** Promotion & discount management, role-based access management, returns & refunds processing

Rider Mobile App

Flutter App

- Core:** Secure rider login, assigned order management, GPS location transmission during active deliveries
- Delivery:** Delivery status updates, proof-of-delivery capture, navigation & route view with maps integration
- Ops:** Push notifications & operational alerts, issue reporting, delivery history, offline sync for network interruptions

IMPLEMENTATION ROADMAP

BUSINESS IMPACT

REVENUE GROWTH

Cart upselling, cross-selling recommendations, milestone rewards, and threshold-based incentives drive higher average order values and repeat purchases.

OPERATIONAL EFFICIENCY

Automated invoice generation, real-time delivery tracking, and centralized order management reduce manual overhead and streamline operations at scale.

B2B EXPANSION

Business customer accounts with GST billing, bulk ordering workflows, and downloadable tax invoices unlock an entirely new B2B revenue channel.

TECHNOLOGY STACK

#	LAYER	TECHNOLOGY
1	Frontend Web	Next.js — Server-side rendering, SEO optimization, responsive interfaces
2	Backend APIs	NestJS — Scalable, modular backend with TypeScript

#	LAYER	TECHNOLOGY
3	Mobile App	Flutter — Cross-platform rider app (Android & iOS)
4	Database	PostgreSQL — Relational data with complex queries & transactions
5	Real-Time	Socket.IO / WebSockets — Live delivery tracking & status updates
6	Caching	Redis — Performance optimization & job queues
7	Storage	AWS S3 — Product images, invoices & delivery proof uploads
8	Maps	Google Maps / Mapbox — Route planning & live rider tracking
9	Deployment	Docker + Cloud VM / Kubernetes — Containerized, scalable infrastructure

DEDICATED TEAM

UI/UX Designer 1 Specialist	Sr. Creative Head 1 Specialist	Next.js Developer 1 Specialist
Flutter Developer 1 Specialist	NestJS Developers 2 Specialists	QA Tester 1 Specialist
Technical SEO 1 Executive	Lottie Animator Optional	Total Strength 9 Members

INVESTMENT BREAKDOWN

#	PARTICULARS	AMOUNT (INR)
1	Designing & Prototyping	₹1,50,000
2	Frontend Development (Next.js)	₹2,00,000
3	Flutter App Development	₹1,00,000
4	CMS Backend for Products	₹1,00,000
5	Custom Backend — NestJS	₹3,00,000

#	PARTICULARS	AMOUNT (INR)
6	Custom Admin Panel	₹80,000
7	Google Maps API Integration	₹30,000
8	Testing & Cloud Deployment	₹50,000
9	Technical SEO & Schema Markup	₹30,000
10	OTP, SMS & Email Integration	₹40,000

TOTAL INVESTMENT

₹9,30,000

After ₹1,50,000 discount (Original: ₹10,80,000)

PAYMENT TERMS

30% Advance · 40% On UI/UX Approval · 30% Before Deployment

Price valid till 15th May 2026

WHY PINEAPPLELABS

RESEARCH FIRST

Every decision is backed by research, not assumptions. Your project is handled by a team of specialists, not a single individual.

AGILE EXECUTION

Flexible and iterative process that delivers faster without compromising quality. Regular updates and full transparency at every stage.

BUILT TO SCALE

Clean design and maintainable code that supports future growth. Defined responsibilities and clear ownership throughout the project.
